

GREAT INDEED IS CAMP OF STOCKTON

Old Carbonate District Looms Powerfully by Virtue of Its Sulphides.

BEST HISTORY WILL YET BE RECORDED

Activity on Properties Is Meeting With Results of Great Encouragement.

Stockton mining district, forty miles southwest of Salt Lake City, on the line of the Salt Lake Route, is one of the oldest mining camps in the State, and reached the zenith of its prosperity in the late seventies of the last century. It has always been noted as a rich silver-lead carbonate producer. Stockton was the home of several smelters, and for a number of years the mining boom was on. When the carbonate changed to a sulphide ore, which it did at varying depths, the mine owners lost faith in the district, the smelters, which had reduced several million dollars' worth of ore, were dismantled, and in a few years Stockton was left in a state of inactivity. And for years was regarded by the mining world as an abandoned mining camp.

lacy of the opinion thus formed, Stockton today is not what it was a few years ago. Stockton is coming to the front. Several reasons might be advanced to explain this. In a measure, account for the present growth and prosperity of the Stockton mining district, and in this connection we deem it not amiss to mention the great Honerine tunnel project, being run through the district from east to west, and which is now in some 12,000 feet, and in its course, has cut through many powerful fissure veins at great depth, the ore in which is rich in silver and lead. The cutting of these tremendous ore veins, at depth, has demonstrated the wisdom of the undertaking, and stamped the seal of success upon the great and difficult enterprise.

Drains District for Miles.
The Honerine tunnel drains the district for miles. The present outflow at its mouth, just above where the company's mill stands, at Buhi station, on the line of the Salt Lake Route, is about 12,000 gallons of water per minute, a portion of which is used in the concentrator mill, and the residue is used for irrigating purposes.

The veins in the Stockton district invariably run north and south and are true fissures, cutting the lime formation in that direction. The veins, which course through the middle of the district from north to south is called the Catherine fissure, out of which, in the several miles located along it, several millions of dollars worth of ore has been extracted during the years which have intervened since the discovery of the district. The ore is a silver-lead carbonate, with a sufficient iron gangue to meet the penalty which smelters impose on ore which contains silica above a certain per cent. It is the splendid quality of the ore for smelting purposes, the demonstrated strength and permanency of the ore veins, which impels the activity prevailing in the district, and the greater mine development now being projected. Stockton, in the near future, will be one of the busiest mining camps in the State. This condition is inevitable, as has been stated, the ore is a carbonate. At depth the ore changes from a carbonate to a sulphide state. This change is clearly demonstrated in the ore veins, which have been cut by the Honerine tunnel, and by other deep mining.

New Stockton Company.
The mines of the New Stockton company are situated one mile east of Buhi station. The property is reached by wagon on a narrow canyon, on an incline of 120 feet to the mile. The company is one of the most active in the district, and employs a force of between 50 and 60 men. The equipment for the safe and economical development of the property is first-class and up to date. The hoisting plant of 55 horse-power is run by a combined gear and friction engine, which for smooth running cannot be excelled. A short distance from the shaft stands a concentrator mill of 75 tons capacity per day. This mill was erected, as was all the equipment, and the development and working of the mines, by Superintendent T. J. Gallagher, and it is to be questioned if a more perfect and effective mill for the extraction and saving of concentrates can be found anywhere. The mill is an unequalled success. Five tons of crude ore run through the mill make one of high-grade concentrates.

Camp Is Ideal One.
The camp itself is an ideal one, and consists of bunkhouses, boarding-house, blacksmith shop, assay office, superintendent's office, and dwelling-houses, all lighted by electricity, with connections on every level of the mine. A telephone system is installed which connects all the workings in the mine with the superintendent's office. Every place is supplied with pure water through pipes. This water, which is brought down by pipe line a distance of three and a half miles, at a cost of over \$1600, is used to supply the mill and for all other purposes. All these things noted above have been erected and put in operation within the past two years under the direct, personal supervision of Mr. Gallagher, whose splendid abilities as a mechanic, engineer and miner are recognized by the company. He was not interfered with or in any way hampered in perfecting every detail of the plant. The result is that everything connected with the mill and the mine works to a mathematical nicety. The New Stockton Mining company own a group of eight claims, covering an area of over 160 acres.

Descriptions of Ore Bodies.
The shaft, the deepest in the district, is down 307 feet, in limestone. A porphyry dyke, easily seen on the surface, runs through the property from north to south. On the 300-foot level this dyke is twenty-six feet wide. Two hundred and sixty feet east of the main working shaft, and on the east side of the porphyry, an ore vein, which is eighteen feet thick and over one hundred feet wide. From this vein on the 300-foot level to the 700-foot level a stop has been cut up in ore, most of which is of good shipping quality. This, of itself, will give some idea of the tremendous body of ore already blocked out at this point. The ore down to a point below the 700-foot level is changed to a sulphide, and appears to be stronger and of richer quality than that at any point above. A fact which tends to emphasize the contention that deep mining in Stockton will bring rich returns. This immense ore body runs down almost vertically, how far no person can accurately guess.

Exploring Virgin Ground.
On the west side of the shaft, on the 300-foot level, a drift has been run eighty feet, where it intersects the ore on the Leopard line. From this point a drift has been run ninety feet north to the Shamrock shoot, from which point is about eighty feet north to the Black Bear, known as "Gallagher's pet." The Shamrock and the Black Bear ore veins about eighty feet north, the extent and richness of which can only be determined by development. It is the purpose of the company, and work is already in progress, to encounter these ore bodies by drifts running east and west from the 100-foot level, and when this shall have been accomplished, though ore will have been exposed to justify the employment of a large force of men for years to come in its extraction. The work of putting the New Stockton on a paying basis has been difficult and expensive, but now that the goal has been reached, stockholders can rest in the full assurance that the dividend season will be a long and gratifying one.

Two Big Groups Consolidated and Work Has Already Started.
John S. Garrison of Long Beach, Cal., who passed through this city Saturday on route East, gave the first intimation of a recent move of much significance in Deep Creek properties. The Garrison and the Monster groups of mining claims in that coming district have recently been merged, and the Garrison-Monster company has been organized to take over and operate this property.

The property consists of twenty-six patented claims, and contains lead, silver and copper ore, and in former days was a busy shipping of ore to the market. There is a bright season dawning for the company and entire district, however, in the building of the Western Pacific road, this needed to be done to the Deep Creek country will cut off all but thirty-five miles from the former long haul of one hundred miles to the tracks.

Active work will begin without delay upon the Garrison-Monster property. The officials and directors for the coming year are as follows: J. P. Gardner, president; J. S. Garrison, vice-president; H. B. Windsor, secretary; S. W. Morrison, treasurer; C. S. Anderson, assistant secretary, and S. B. Tuttle and Zerah Castle.

RECORD WEEK ENDS ON LOCAL 'CHANGE'

High-Priced Stocks Responsible for Fine Total of Business Done.

Saturday ended one of the best weeks on the local exchange for some time, there being a total of 17,000 shares sold during the week, representing a market value of \$190,000, although there intervened one day of idleness due to the Memorial day holiday. For the same week of last year a total of 25,358 shares were sold, representing a total of \$43,329.52.

Columbus Con. Goes Up.
During the one session of Saturday a total of 3,300 shares passed hands, with a market value of \$2,327.50. On this session, as during the entire business week, there was a large dealing in higher priced stocks. Columbus Consolidated, Daily Judge and Little Bell all being generously bought and sold. Columbus Consolidated began the day at \$7.25, but ended it at \$7.60.

High Priced Stocks Demanded.
Daily Judge brought as high as \$11.75, and as low as \$11.62 1/2. Little Bell brought \$12.25 for 200 shares, and \$12.12 1/2 for 100 shares. Ohio Copper stock brought \$1.25. There were 100 shares of Nevada Hills stock sold during the morning at \$2.05 a share.

reports that in all portions of the vast workings of the mine everything is going along smoothly and satisfactorily. The mill is running one shift as yet, there being sufficient ore in the storage bins to run for one shift until the necessary flume work is done.

GOOD NEWS OF PARKER MINE.

Parker and Ed Williams Groups Both Giving Generous Results.

In a letter to this city, C. H. Goss, who is operating at Parker Mountain, sends word that a big ore body has been put to work on the Ed Williams group of mining claims. This property is located about twenty-five miles from Challis, and the discovery has created no small amount of excitement.

Two feet of high-grade ore have been uncovered, the average values being all the way from \$100 to \$200 in gold and silver, the values on the surface crops being given between those amounts. An additional force of men has been put to work, and no time will be lost in developing this new find.

Mr. Goss is interested in the Parker Mountain property for only two months, work has been progressing all winter, and with the most encouraging results. Mr. Goss states in addition that his pack train moves two tons of ore each five days, and the Parker group is sending out about one ton of shipping and one ton of milling ore at the same intervals. Fully 1000 tons of ore are blocked out in the property that will average at least \$20 to the ton, and some ore is being that will run as high as \$300 to the ton.

There is a season of great prosperity ahead for the Parker and the Ed Williams properties, the indications and results never having been more favorable.

WORK ON WEST QUINCY.

Active Drilling Will Soon Begin to Reach Low Depths of Mine.

It was announced Saturday by President G. D. R. Turner, of the West Quincy company, that the new work for the 400-foot level of the mine was progressing rapidly, and advice had been received from New York that the machinery had been shipped from that city on May 25. Mr. Davis, the inventor, is expected within the next two weeks to take personal charge of this new work, and under his superintendency the efforts to reach the lowest depths of the West Quincy will not be permitted to lag.

President Turner, who has just arrived from a several weeks' trip to Los Angeles, states that the preparatory work in the mine consisted in putting in up-raises 50 feet in height on the 400-foot level, so that the head-frame will be permitted to raise and lower while the drill is at work. The first upraise, which is 20 feet from the shaft, is about completed, and there will be little delay in getting to work when the necessary machinery is received.

The West Quincy management, and all Park City is watching the new methods to be employed with the keenest interest. That the drill method will be productive of results of the utmost importance to this and other properties is readily conceded by all who have given the matter their attention.

Compressor Is Ordered.

General Manager Lafayette Hanchett, of the Boston Consolidated company, placed an order Saturday with the Mine and Smelter Supply company for a 25-horse power compressor, of the Laidlaw, Dunn & Gordon Cincinnati type, which will be driven by electricity.

Ore Shipments.

The Pioneer sampler released the following number of cars of ore Saturday: Stockton 2, Bingham 2, Alta 3, Tintic 2. The Taylor and Brunton sampler released the following: Tintic 16, Nevada 1, Idaho 1, Bristol 1.

GREAT ORE TONNAGE ADDED TO

Columbus Consolidated Piling Up Resources Third Level.

That the ore body just discovered on the 300-foot level of the Columbus Consolidated company's property, at the management's property, is a large block of the ore, and that it is a valuable asset to the company, is vouched for by T. J. Gardner, president of the company, who returned Friday evening from the property, and that he is greatly pleased with the developments on the third level.

Cross-Cut for Ore.

The management has been working for a distance of ten days, after the afternoon, and Mr. Gardner states that each and every portion of the ore body is being worked, and that it is a valuable asset to the company, and that he is greatly pleased with the developments on the third level.

Impetus to Company.

The excellent condition of the Columbus Consolidated property, and the great interest in the developments, and the achievements in the mining industry, is a great impetus to the company.

BLIZZARD ANNUAL

Officers Elected and Reported Given by Manager.

At the annual stockholders' meeting of the Blizzards company, held during the week, the following officers were elected for the coming year: President, N. A. Marshall; Secretary, J. A. Marshall; Treasurer, J. A. Marshall; and the well-known manager, J. A. Marshall, who composed the board of directors. These gentlemen, with J. A. Marshall, were elected to the office of the company, and the well-known manager, J. A. Marshall, who composed the board of directors. These gentlemen, with J. A. Marshall, were elected to the office of the company, and the well-known manager, J. A. Marshall, who composed the board of directors.

Ore and Bunkhouse.

The ore and bunkhouse were under construction by the Blizzards company, and the total cost of the week amounted to \$10,000.

The Metal Quotations.

The metal quotations were as follows: Silver, 67c; copper, 15c.

Mining Blanks.

Plant Your Money Where It Will Grow

Newhouse Copper Plant Addition Offers Greatest and Best Opportunity

This tract of 140 acres, now surveyed and platted into lots, presents the most ideal site for either residences or business buildings of any ground contiguous to the great smelting and mining center of the west. Only an inspection is needed to make its advantages apparent. The plat below gives an accurate idea of the location, but to appreciate the beauties of the site you must see the ground itself.

Consider These Points

- Only available tract affording purest artesian water.
- Ground level, well drained; no costly grading required.
- Only five minutes' walk from the great plant of the Utah Copper Company.
- The main highway that brings business passes directly through this tract.
- No business restrictions are imposed.

Bingham's boundless mineral wealth, the riches of the other great camps of the State, will for generations keep the wheels of industry turning here. Where men are busy and prosperous, and population increases, there property values climb.

Within five years this locality will be the home of 10,000 persons who earn good wages and spend their money. A prosperous, busy city is now in embryo here. Now is the time to get in on the ground floor.

General Description

- Lots (corner)—35x121 to 20-foot alley. (Others) 121 to 20-foot alley.
- Prices—\$50 to \$200, according to location.
- Terms—One-half cash; balance 30 or 60 days.

An interurban electric line, for which the franchise has been secured and upon which construction is about to begin, will connect this locality with Salt Lake and the urban centers. Do you see the advantage to the business man and investor?

Let us tell you why this is the best investment ever offered to the man of small means. You need take nothing granted. We will furnish the proof. You're welcome to know whether you buy or not.

Newhouse Copper Plant Addition, Office, Room 5 Eagle Blk., Salt Lake
